

Revenue Statistics OECD 2025: The United States

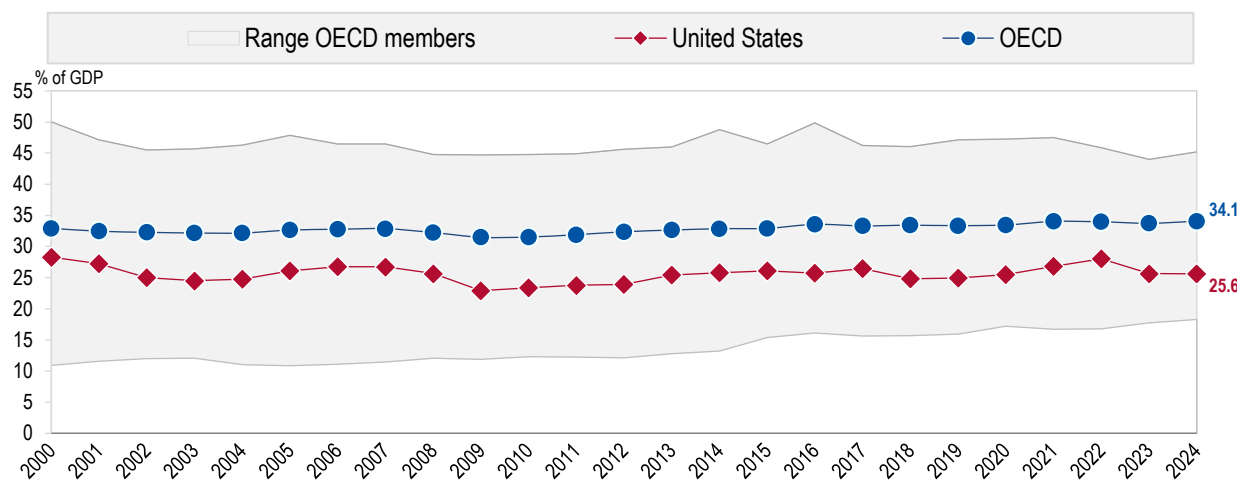

Revenue Statistics 2025 - the United States

Tax-to-GDP ratio

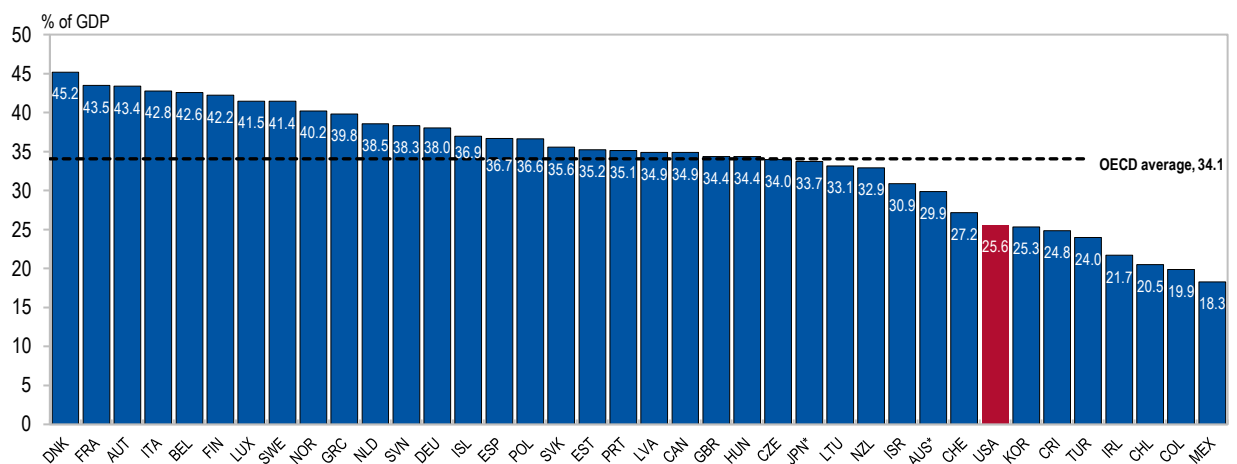

Tax-to-GDP ratio over time

The OECD’s annual Revenue Statistics report found that the tax-to-GDP ratio in the United States did not change between 2023 and 2024, remaining at 25.6%. Between 2023 and 2024, the OECD average increased from 33.7% to 34.1%. Since the year 2000, the tax-to-GDP ratio in the United States has decreased from 28.3% to 25.6%. Over the same period, the OECD average in 2024 was above that in 2000 (34.1% compared with 32.9%). During that period, the highest tax-to-GDP ratio in the United States was 28.3% in 2000, with the lowest being 22.9% in 2009.

Tax-to-GDP ratio compared to the OECD, 2024

In 2024, The United States ranked 31st¹ among the 38 OECD countries with a tax-to-GDP ratio of 25.6%, up from 32nd place in 2023. The OECD average in 2024 was 34.1%.

* Australia and Japan are unable to provide provisional 2024 data, therefore their latest 2023 data are presented within this country note.

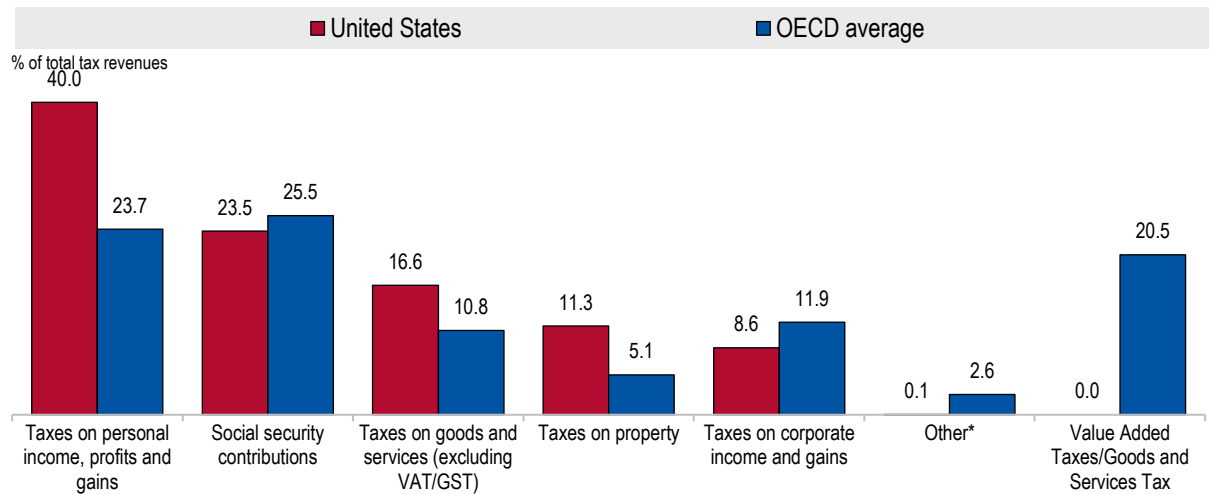

1 In this note, the country with the highest level or share is ranked first and the country with the lowest level or share is ranked 38th.

Note: In the OECD classification the term “taxes” is confined to compulsory unrequited payments to general government or to a supranational authority. Taxes are unrequited in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments. For more information see the [OECD classification of taxes and interpretative guide](#).

Tax structures

Tax structure compared to the OECD average, 2023

The structure of tax receipts in the United States compared with the OECD average is shown in the figure below.

* Includes 1300 Unallocable between personal and corporate income tax, 3000 Taxes on payroll and workforce and 6000 Other taxes. Figures in the chart may not sum to 100 due to rounding.

All the data presented in this country note can be found within the [Revenue Statistics OECD comparative dataset](#) on the OECD Data Explorer.

Relative to the OECD average, the tax structure in the United States is characterised by:

- » Substantially higher revenues from taxes on personal income, profits & gains, and higher revenues from property taxes and goods & services taxes (excluding VAT/GST).
- » A lower proportion of revenues from taxes on corporate income & gains and social security contributions.
- » No revenues from value-added taxes.

TOTAL	7 293 845	7 105 892	- 187 953	100	100	0.0	-	-	-

¹ Includes income taxes not allocable to either personal or corporate income.

² In 2017, U.S. taxpayers that had unrepatriated accumulated earnings abroad incurred a tax liability on those earnings due to the new tax law. However, U.S. taxpayers may pay any tax on the deemed repatriations in instalments over eight years so there may be a significant difference in the tax liability in 2017 represented in these figures from the actual receipt of tax revenue.

Tax revenue includes net receipts for all levels of government; figures in the table may not sum to the total due to rounding.
